Andreas Sewe @sewe commented 2 weeks ago

Maintainer

I would re-order the message signature. ATM, it's hard to tell which parameter the change entry is added to. If you have `result` first, as in `result.add(...)` things become clearer.

Alternatively, let the extracted method return `Optional<RepositoryChangeEntry>` and do the `add` here.

```
computeChangeEntry(requiredNode, changeSet, path, element).ifPresent(result::add);
```

```

309    +        changeInfo.getOriginPath(), changeInfo.getOriginCommit());
310    +    }
311    +    }
312    +
307    313    /**
308    314    * Patches the changes types for the given change entries by manually
309    315    * determining the change type using the token element index. This needs to be
...    ...

```

Can we move this and the previous if (!teamscaleProject.isPresent()) out of validateBranchName. Having validateBranchName set serverDetails as a side-effect is quite confusing.

I think the order here is reversed. It should be the description and then the message (like the rest of the platforms). As you can see in the screenshot, the warning is not added correctly.
